

GA Learning Design Concepts

# Using ChatGPT to Develop Content

**Premium LLMs like Google Gemini or ChatGPT Plus will lead to higher quality results.**

*Multimodal capabilities, like being able to attach images to prompts, are typically a premium feature as well.*

# The Personality of ChatGPT

Understanding the personality of an LLM like ChatGPT is the first step to decide how to interact with it.

It's **receptive to ideas and collaborates** on deliverables.

It's **forgetful**: Will lean toward the basics with each new prompt.

It's **overly confident**: even if it has no idea, the model typically responds as if it is correct.

# Your Jr. Designer, ChatGPT

Adopt the perspective that ChatGPT can be your Jr. **assistant in curriculum development**

Treat it as a junior learning designer/student of design

Guide it with necessary feedback for improvement

Remind it of learning principles, preferences, and best practices

Don't overload it with tasks - break things up into small chunks.

# Prompts for Workflow

In general, your series of prompts for any given workflow should have:

**Role-definition of ChatGPT**  
*(You are a learning designer working with me.)*

**The context of the course**  
*(We will create a course that aims to X for Y for students in a virtual setting, etc.)*

**A prompt isn't all or nothing!**  
*It's okay to have a back-and-forth exchange instead of 1 long prompt*

**Basic learning principles of the course**  
*(The activities in the practice section should have on-the-job scenarios and should have the students produce X or Y output).*

**The task you want ChatGPT to perform.**

# Help ChatGPT Help YOU!

Other aspects you can add to help ChatGPT understand your ask might be:

The **format** of the output you want

“A table with 6 rows and 3 columns”

An **example** of the output you want.

“Use the document I’ve attached as an example to work from in your response”

The **tone** you want ChatGPT to use.

“The guidelines for this Lab should be clear and have a positive, encouraging tone”

# Sample Custom Instructions for an LED

What would you like ChatGPT to know about you to provide better responses?

 *I am a Learning Experience Designer in the United States, but my company delivers courses all over the world. We deliver bootcamps and up-skilling course to both consumers and enterprises in the fields of Data, AI, UX Design, and Software engineering.*

*My job is to develop curriculum materials (sometimes for live instruction and sometimes for async learning) that provide a best-in-class, practical, hands-on learner experience, and are easy for our instructors to implement.*

# Sample Custom Instructions for an LED

## How would you like ChatGPT to respond?

 You are an autoregressive language model that has been fine-tuned with instruction-tuning and RLHF. You carefully provide accurate, factual, thoughtful, and nuanced answers, and are brilliant at reasoning. If you think there might not be a correct answer, you say so.

Since you are autoregressive, each token you produce is another opportunity to use computation, therefore you always spend a few sentences explaining background context, assumptions, and step-by-step thinking before you try to answer a question.

If I start a prompt with vv, you don't have to explain background context, assumptions, and step-by-step thinking in your response. Simply respond to the prompt as efficiently as possible.

If I say "speaker notes" as my prompt, what I really mean is

"Can you create presenter notes for each slide? (each image I have attached is a separate slide)"

...

Format for GA speaker notes:

PURPOSE:

`$single_sentence_slide_purpose`

TALKING POINTS

- `$tp_1`
- `$tp_2`
- `$tp_3`

TEACHING TIPS

- `$teaching_tip1`

Use American English unless I specify otherwise.

You can call me `[name]`

# Top 5 Example Use Cases

1. Write clear **learning objectives**, then ask for a draft **outline for a lesson** covering them.
2. Quickly **change the format** of a document or spreadsheet
3. Brainstorm an idea for a **practical processing activity**, then ask ChatGPT to draft the **directions, worksheets, etc.** needed to execute it
4. Take a screenshot of a slide, then ask ChatGPT to draft **speaker notes**
5. Brainstorm ideas for **coding exercises**, then have ChatGPT **draft the exercise and solutions** (with comments!)

**In every use-case, it is important to check the outputs you receive for accuracy.**

*It's not a matter of if the model will hallucinate, but when!*

# ***“Falling Asleep at the Wheel”***

## **A Field Experiment on HR Recruiters**

- Researchers found that while higher-quality AI improved task efficiency in HR recruitment, **it led to reduced human engagement and poorer decision-making**
- More experienced recruiters performed significantly better when given a lower quality AI assistant, because they were less likely to “*fall asleep at the wheel*”

**Don't fall asleep at the wheel.**
